

## **SECTION 7.0 EFFECTS FOUND NOT TO BE SIGNIFICANT**

### **7.1 INTRODUCTION/PURPOSE**

Section 15128 of the CEQA Guidelines requires that an EIR briefly describe any potential environmental effects that were determined not to be significant during the initial project scoping and, therefore, were not discussed in detail in the EIR.

One subject required to be analyzed under CEQA was determined not to be potentially significant during Initial Study preparation and during the public scoping period. Therefore, this environmental issue has not been analyzed in the EIR and has received no further consideration.

### **7.2 ISSUES FOUND NOT TO BE SIGNIFICANT**

#### **Agricultural Resources**

Although a portion of the Encina (yellow) off-site pipeline alignment crosses an agricultural area and traverses its edge, no effects to agricultural resources would result as impacts would be temporary and agricultural operations would not be significantly interrupted or curtailed as a result of the proposed project.
